# Section 19

Gas stays or gas struts as they are also known, are the nitrogen filled rods used to support opening hatches and doors. However over time and with regular use the pressurised nitrogen gas can escape, rendering the stays ineffective.

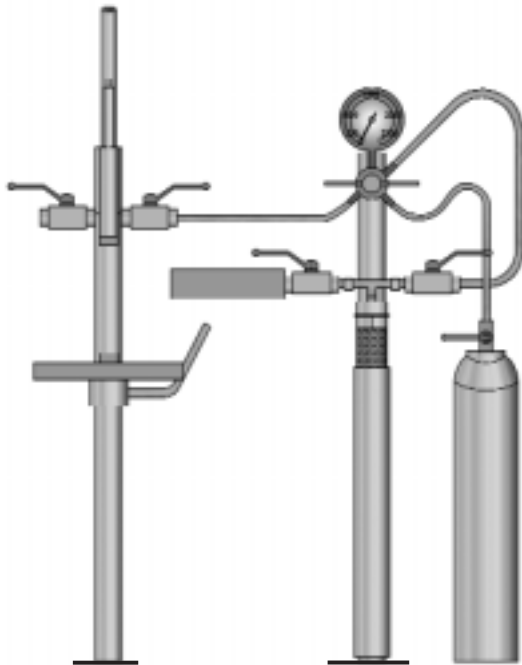

When this happens users have until now had just two options:

1. Put up with it.
2. Pay for replacement gas stays.

There is now a third option, whereby users should be able to have their stays re-gassed at only a fraction of the cost of replacement. In practice 95% of stays may be re-gassed.
